INFORMATION ARCHITECTURE & WIREFRAMES

UI/UX Design Internship — Task 3

Prepared by: Deva Dharshini M
Product: EdVyro student task and submission flow
Format: Mobile-first low-fidelity wireframes + desktop adaptation

Project goal

Help a student understand an internship task, find the required deliverable, paste a shareable project URL, and receive clear success or error feedback.

Scope note

This is a proposed design concept based on the supplied task brief and the EdVyro task/submission screens discussed earlier. It is not a claim that the live product already works this way. The flow should be checked with users before implementation.

Deliverables included

• Primary journey with entry, decision, success and error states
• Sitemap / screen inventory
• Mobile-first wireframes
• One desktop adaptation
• Interaction annotations and short explanation

1. Primary user journey

Goal: submit one viewable project link without confusion.

STEP	USER ACTION / STATE	SYSTEM RESPONSE
1. Entry	Student opens the task from the dashboard.	Show task title, status and open-task action.
2. Review	Student reads objective, checklist and deliverable.	Make requirements easy to scan; show “Continue to submission”.
3. Decision	Is the project link ready and viewable?	If no, explain how to prepare the file and enable viewer access.
4. Submit	Student pastes a URL and taps “Submit for review”.	Check that the URL field is not empty and the link format is plausible.
5. Error	URL is empty, invalid or inaccessible.	Explain the issue, keep the entered URL, and allow retry.
6. Success	A valid submission is accepted.	Show confirmation, submitted link and status.

2. Sitemap / screen inventory

Screen	Purpose	Key content / controls
Dashboard / Tasks	Entry point	Task list, status, “Open task”
Task details	Explain requirements	Objective, checklist, deliverable, continue button
Submit project link	Collect one URL	Project URL field, sharing reminder, submit button
Error state	Help user recover	Specific error, fix instruction, retry
Success state	Confirm action	Success message, submitted link, status, return action

3. Mobile-first low-fidelity wireframes

These are structural sketches. They show hierarchy and behavior, not final visual styling.

MOBILE A — TASK DETAILS	MOBILE B — SUBMIT LINK
■ EdVyro | Profile **Information Architecture & Wireframes** Status: Not started **OBJECTIVE** Create a user journey and responsive wireframes. **CHECKLIST** ■ Entry, decision, success and error states ■ Sitemap / screen inventory ■ Mobile wireframes + desktop adaptation **DELIVERABLE** One view-only link [Continue to submission] Home | Tasks | Submit | More	← Back to task **Submit your work** Paste one public or view-only link. **Project URL *** [https://…] **Before submitting** ■ Link opens without access request ■ Reviewer permission is Viewer ■ Supporting files are together [Submit for review] Help: sharing a view-only link
Submission not sent yet **We could not access this link.** Check that the URL is complete and sharing allows the reviewer to view it. **Project URL *** [https://…] [Check link again] [Save and return]	✓ Submission received **Your project link was submitted.** Task: Information Architecture & Wireframes Status: Submitted for review Submitted link: [View project] [Return to tasks]

Mobile design notes

- Put the task title and required deliverable near the top.
- Use one primary action per screen.
- Keep the URL label visible and explain sharing permissions before submission.
- Error text should say what happened and how to fix it; success should confirm the status.
- Stack content vertically on small screens and use comfortably tappable buttons.

4. Desktop adaptation

Desktop layout: task information on the left and the submission panel on the right. Keep the same content and feedback states.

EDVYRO | Home Tasks Submit Help	EDVYRO | Home Tasks Submit Help
LEFT COLUMN — TASK INFORMATION **Information Architecture & Wireframes** Objective: Create a user journey and responsive wireframes. Checklist: ■ User journey states ■ Sitemap / screen inventory ■ Mobile and desktop wireframes Deliverable: one view-only link	**RIGHT COLUMN — SUBMISSION** Submit your work Project URL * [https://…] Before submitting: ■ Link opens for reviewer ■ Viewer permission enabled [Submit for review] Error or success feedback appears here.
Footer: Help • Accessibility • Privacy	Status: Not submitted / Submitted for review

5. Interaction annotations

Element	Behavior	Why it helps
Continue to submission	Moves from task details to URL form.	Makes the next step obvious.
Project URL field	Accepts one URL and keeps its label visible.	Reduces uncertainty about what to paste.
Submit button	Checks for an entered URL and starts submission.	Prevents avoidable empty submissions.
Error message	Explains issue and next action; keeps URL for retry.	Helps users recover without starting over.
Success confirmation	Shows submitted state and a return-to-tasks action.	Confirms the action completed.

6. Short explanation

This design organizes the student task journey into task details, submission form, error feedback and success confirmation. The sitemap shows how screens connect. Mobile wireframes prioritize the objective, checklist and one clear action. The submission screen explains the expected URL and link-sharing permissions. Error and success states make feedback explicit. A desktop adaptation uses two columns while preserving the same content.

7. Final checklist

■ Journey includes entry, decision, success and error.
■ Sitemap / screen inventory included.
■ Mobile-first wireframes and one desktop adaptation included.
■ Interaction behavior annotated.
■ File is shared through one public or view-only link.
